2

3 1. A system for objects on a network, said system including

4

a receiver coupled to said network;

5

a cache engine operative to record a object from said network on mass

6

storage;

7

wherein said cache engine is capable of selecting times to record said

8

object, selecting locations to record said object, storing said object holographically so as

9

to continue operation after loss of a portion of said mass storage, or minimizing time

10

needed to write to said mass storage.
